Please fix the issue so all occurrences of {name} are replaced with the user's input.
Explain what was wrong and show the corrected code.

This issue usually happens because the program **only replaces the first occurrence** of `{name}`, or replaces it incorrectly.

❌ What was wrong

You might have written something like:

```cpp
excuse.replace(excuse.find("{name}"), 6, n
```

👉 Problem:

Why is this happening and how can I fix it so the output is different each time?
Explain simply and correct the code.

This happens because **random numbers in C++ aren't truly random by default.**

❌ Why your program gives the same excuse every time

When you use:

```cpp
rand()
```

without setting a starting point (called a *seed*), C++ always starts from the **same seed value**, so it generates the **same sequence of numbers every run.**

Improve my C++ excuse generator by creating more creative and funny excuse templates.

Give me at least 10 unique excuses using {name} as a placeholder.
Make them sound realistic but humorous.

Here are **15 creative and funny excuse templates** you can directly add to your program 😄

C++

```
vector<string> excuses = {
    "{name} couldn't finish the assignment because the laptop started updating at the worst
    "{name} was about to submit the homew ••• en the Wi-Fi decided to take a break.",
    "{name} tried to complete the assignment, but the keyboard began typing random letters o
    "{name} couldn't submit the work because the file mysteriously vanished from the desktop
    "{name} was working seriously when the power cut turned everything off.",
```

Write a beginner-friendly C++ console program that generates random excuses for students.

The program should:
- Ask for the student's name
- Store at least 10 excuse templates in a vector
- Use random selection to pick one excuse
- Replace {name} in the template with the user's input
- Display the final excuse

Keep the code simple and easy to understand.

Here's a **simple and beginner-friendly C++ program** that does exactly what you asked 👇

C: > Users > HOME > Desktop > FOCP II - Assignments > Student_Excuse_Generator.cpp > main()

```cpp

    // Generate random index
    int randomIndex = rand() % excuses.size();

    string excuse = excuses[randomIndex];

    // Replace {name} with actual input
    size_t pos = excuse.find("{name}");
    while (pos != string::npos) {
        excuse.replace(pos, 6, name);
        pos = excuse.find("{name}");
    }

```

OUTPUT DEBUG CONSOLE TERMINAL PORTS PROBLEMS

Code

```
PS C:\Users\HOME> cd "c:\Users\HOME\Desktop\FOCP II - Assignments\" ; if ($?) { g++ Student_Excuse_Generator.cpp -o Student_Excuse_Generator
 } ; if ($?) { .\Student_Excuse_Generator }
Enter student name: Mayank

Generated Excuse:
Mayank couldn't finish the assignment because the laptop installed updates for 6 hours.
PS C:\Users\HOME\Desktop\FOCP II - Assignments>
```
